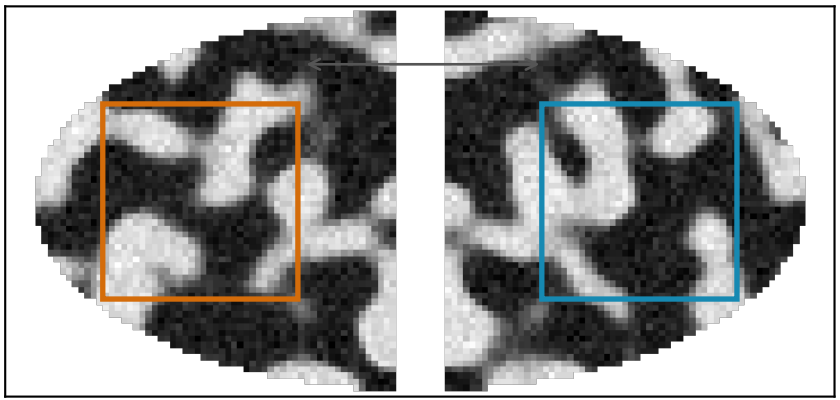
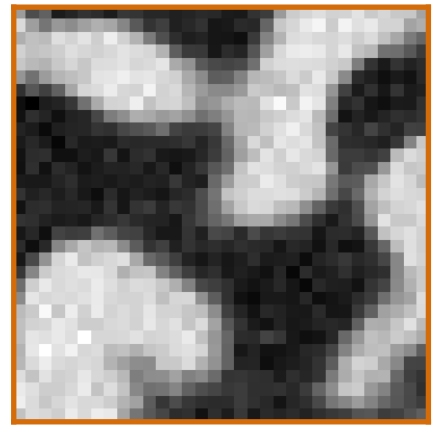
Where the other-hemisphere donor comes from

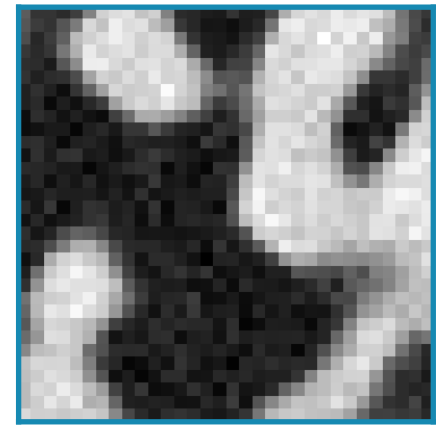
Same position in opposite hemispheres
(schematic arrangement)



Target patch



Opposite-side patch
mirrored into target coordinates



Synthetic fields with shared person components and separate side components; not an anatomical MRI.
The outline is illustrative only. Homologous locations are defined by construction; no registration was estimated.
Seed 101, BASE, first target, prior 0.25. Both patches are shown on the same intensity scale.
