Synthetic eye: changing the pupil is not changing the eye

Fixed example: seed 201, target 0. Blue: target pupil; dashed orange: candidate. Dilation +30%, same latent iris texture.
Numbers describe this one example, not cohort means. c uses 16 normal-pupil stranger donors; masked region is central 64 x 64.
Illustrative simulator, not human eye data. A pupil outline alone is not an identity measure.
